Summary

Front-end focused Full Stack Developer with 3+ years of professional experience building scalable, responsive web and mobile applications using React, JavaScript, TypeScript, Vue.js, and modern development tooling. Experienced in API integration, responsive UI development, AI-assisted workflows, and agile collaboration. Passionate about building performant user experiences, writing maintainable code, and delivering projects from concept through deployment.

Technical Skills

- **Frontend:** React, TypeScript, Vue.js, JavaScript, HTML5, CSS3, Flutter, Dart
- **State Management & APIs:** REST APIs, Asynchronous Data Handling, GraphQL, Redux
- **Back-End:** Node.js, Express, Prisma, Sequelize, PostgreSQL, MongoDB
- **Tools and Platforms:** Git, Vite, NPM, Webpack, Netlify, Render, Vercel, Docker, Figma, Claude, Codex
- **Development Practices:** Agile Development, Component-Based Architecture, Cross-Functional Collaboration, AI-Assisted Development, Performance Optimization

Experience

onDiem

Jan 2024 - Present

Charlotte, NC

Full Stack Developer

- Redesigned and rebuilt a cross-platform mobile application using scalable front-end architecture and AI-assisted workflows, enabling customers to apply for jobs 30% faster.
- Developed responsive UI components in Vue.js and integrated RESTful APIs using Axios, delivering a consistent experience on iOS and Android and improving user satisfaction
- Implemented AI-first engineering workflows that accelerated feature delivery and improved development efficiency across projects.
- Designed agentic development workflows based on the Ralph Loops methodology and component-based architecture, reducing context switching and increasing engineering consistency
- Collaborated with cross-functional teams to package and submit production-ready apps to the Apple App Store and Google Play Store using Flutter, achieving on-time releases and meeting store compliance
- Debugged and optimized Vue.js components and Sequelize queries using Vite, delivering smoother feature updates and reducing bug turnaround time in an agile development environment

Stoncrest Suites

Aug 2023 - Jan 2024

Fort Mill, SC

Full Stack Developer

- Designed and developed a responsive office booking platform using Vue.js, Sequelize, and modern JavaScript frameworks, enabling employees to reserve workspaces online and reducing manual scheduling effort
- Built dynamic admin dashboards with role-based access control and reservation management functionality, allowing managers to view and edit bookings in real time and reducing support requests
- Integrated backend APIs and optimized data flow between front-end and server-side systems, which sped up page loads and improved overall user responsiveness
- Collaborated with product managers and designers to translate Figma mockups into responsive UI components, accelerating the UI delivery schedule
- Improved application scalability and maintainability through reusable component design and clean coding practices.

SkyKing Studios

Full Stack Developer

Fort Mill, SC

- Developed browser-based and desktop game experiences using Vue, JavaScript, Electron, and Progressive Web Application (PWA) technologies.
- Built offline-capable systems using local storage and synchronization patterns to support reliable gameplay across environments with unstable connectivity.
- Designed and implemented responsive game UI systems, animations, modal workflows, and reactive state-driven interfaces.
- Integrated WebSocket-based multiplayer and real-time game synchronization systems for live player interactions.
- Packaged and deployed Electron applications for desktop platforms while maintaining shared web and desktop codebases.
- Worked with modern frontend tooling including Vite, Node.js, Git, and CI/CD-style deployment workflows.
- Implemented save systems, local persistence layers, achievement systems, and player progression tracking.
- Built reusable frontend component systems with a focus on scalability, maintainability, and responsive design.
- Debugged production build issues across desktop, web, and mobile environments including PWA caching, Electron packaging, and platform compatibility.
