Summary

Frontend / Full Stack Engineer with 3+ years of professional experience building production web applications, reusable UI patterns, REST API integrations, and customer-facing workflows. Strong React, Vue, TypeScript, JavaScript, and API integration experience with a focus on developer-facing products, dashboard UX, component architecture, and AI-assisted product development. Experienced working across the full feature loop from requirements and prototyping through implementation, documentation, debugging, release support, and stakeholder communication.

Technical Skills

- Frontend: React, Vue, TypeScript, JavaScript, HTML5, CSS3, SCSS, Responsive UI, Component Architecture
- State Management & APIs: REST APIs, Axios, Asynchronous Data Handling, Form Workflows, Front-End State Management
- Developer-Facing UI: Dashboard UX, Data-Intensive Interfaces, Form Workflows, Embeddable UI Concepts, API-Driven Interfaces, Frontend State Management
- BackEnd: Django, Python, Node.js, Express, Prisma, Sequelize, SQL, PostgreSQL, MongoDB, External APIs
- Tools and Platforms: Git, Vite, NPM, Webpack, Netlify, Render, Vercel, Docker, Figma, CI/CD Familiarity
- Development Practices: Agile Development, Unit Testing, Debugging, Technical Documentation, Cross-Functional Collaboration, Performance Optimization.

Experience

onDiem

Jan 2024 - Present

Full Stack Developer (frontend focused) Columbia, SC

- Built and maintained production self-service workflows across onboarding, credentialing, subscriptions, public partner pages, and admin tools using Vue.js, JavaScript, REST APIs, and reusable UI patterns.
- Translated complex operational requirements into maintainable frontend experiences, working directly with designers, developers, QA, and business stakeholders to refine workflows and reduce ambiguity before implementation.
- Developed responsive, API-driven components integrated with Rails-backed services through Axios, supporting consistent behavior across web and mobile-facing product surfaces.
- Created reusable component patterns and implementation documentation to help design and engineering teams ship consistent UI behavior across related workflows.
- Debugged production frontend issues across component state, API responses, conditional rendering, and Rails-backed data flows using browser tooling, Vite, logs, and regression testing.
- Supported full release cycles for production applications, including regression checks, app store submission support, issue triage, stakeholder updates, and post-release fixes.
- Contributed to AI-assisted workflow experimentation and internal product exploration, including agent-loop concepts, AI-supported prototyping, and structured approaches to turning product ideas into working UI.

Stonecrest Rentals

Aug 2023 - Jan 2024

Full Stack Developer Fort Mill, SC

- Designed and developed a responsive office booking platform using React, Node.js, Sequelize, and modern JavaScript, translating stakeholder requirements and Figma designs into maintainable customer-facing workflows.
- Built dynamic admin dashboards with role-based access control and reservation management functionality, allowing managers to view, edit, and manage bookings in real time.
- Integrated React views with backend APIs and optimized client-server data flow, improving responsiveness, reliability, and maintainability across reservation workflows.
- Worked directly with stakeholders to clarify requirements, review UX decisions, document API behavior, and deliver iterative updates based on business feedback.
- Improved maintainability through reusable component design, source control discipline, clean coding practices, and deployment workflows across Netlify and Render.

Education

2020-2024

Brigham Young University Idaho

Bachelor's Degree

- Built full-stack applications using React, Vue.js, JavaScript, Node.js, and Express
- Designed custom components and responsive UIs with HTML5, CSS3, SCSS, and Tailwind CSS
- Deployed and maintained projects using Netlify, Heroku, Vercel, and Render
- Worked with relational and NoSQL databases including PostgreSQL, MySQL, and MongoDB
- Gained proficiency in Prisma and Sequelize ORM tools for managing database schemas
- Received my Web Development Certificate

Projects

Generative UI / Portfolio Assistant

Built an AI-assisted portfolio experience that uses structured project data, chatbot context, and dynamic UI rendering concepts to help users explore technical work through conversational interaction. Designed the project around reusable frontend models, component selection, and AI-driven presentation logic.

Healthcare Data Platform

Built a full-stack healthcare data application using Django, PostgreSQL, React, Supabase, and Vercel. Designed relational models for patients, encounters, conditions, and observations; imported synthetic healthcare datasets through ETL workflows; and built analytics-ready backend structures for dashboard and reporting use cases.

OCR / Referral Extraction Prototype

Developed an AI-assisted document extraction prototype focused on converting referral documents into structured data. Designed the system with an abstraction layer prepared for multiple OCR or AI providers, separating document ingestion, extraction logic, and downstream application workflows.
